Human Plasminogen congenital deficient plasma

RUO -80°C -40°C

Associated products

Plasminogen human deficient plasma (acquired)

Plasminogen Immunodepleted Deficient Human Plasma

Reference	Presentation	Format
6-PPDPLGC	Vial	Minimum 50 mL

Packaging in bottle. The minimum packaged volume is 50 mL. The price offer is based on the volume requested.

Informations

Plasminogen is a plasma protein which is involved in its active form (plasmin) in the processes of fibrinolysis. Plasminogen is synthesized by the liver, kidney, cornea, and eosinophils.
It exists in 2 forms: glu-plasminogen (native form) and lys-plasminogen (more active form).
These 2 forms can be transformed into plasmin.

Advantages

Minimize test time.
Ready to use.

Characteristics

Special plasmas are derived from patients with a congenital deficiency, severe or moderate, or presenting a particular profile.
No buffer or preservatives are added.
Quickly frozen at -80° C, the plasma maintains perfectly intact the matrix.
All plasmas are stable when stored at -40° C to -80° C.
We carefully pack with dry ice during shipment.
No additive or preservative.
Expiry date > 1 year.
Plastic vials.
