# EMICIZUMAB Controls

## Associated products

EMICIZUMAB Calibrator

## Informations

Emicizumab, a drug intended for the prophylactic treatment of patients with hemophilia A, is a bispecific antibody that bridges activated Factor IX (FIXa) and Factor X (FX), thereby restoring FVIII function. missing, necessary for normal hemostasis.

**Control plasma levels 1 & 2 for EMICIZUMAB**

Emicizumab controls are level 1 & 2 controls intended to validate the calibration curve of FVIII activity by Emicizumab determined by an activated partial thromboplastin time.

## Components

- Level 1: 5 vials x 1.0 mL
- Level 2: 5 vials x 1.0 mL

## Characteristics

Emicizumab levels 1 and 2 controls are used in the same way as plasmas from citrated patients. Emicizumab controls are prepared from citrated plasma immunodepleted in FVIII to which Emicizumab has been added to obtain a final concentration of 25 µg / mL (level 1) and 75 µg / mL (level 2).
