Human Factor X congenital deficient plasma >5%

RUO -80°C -40°C

Associated products

- Human Factor II congenital deficient plasma >5%
- Human Factor IX congenital deficient plasma (severe <1%)
- Human Factor IX congenital deficient plasma >5%

Reference	Presentation	Format
6-PPD10C	Vial	Minimum 50 mL

Plasma from a single human donor with congenital FX deficiency.

Packaging in bottle. The minimum packaged volume is 50 mL. The price offer is based on the volume requested.

Informations

Factor X (FX) is a glycoprotein synthesized by the liver, dependent on vitamin K. FX is involved in the common pathway of coagulation.
It is activated in FXa by the FT-FVIIa complex or by the FVIIIa-FIXa complex in the presence of phospholipids.
FXa is neutralized by TFPI and antithrombin.

Advantages

Minimize test time.
Ready to use.

Characteristics

Special plasmas are derived from patients with a congenital deficiency, severe or moderate, or presenting a particular profile.
No buffer or preservatives are added.
Quickly frozen at -80° C, the plasma maintains perfectly intact the matrix.
All plasmas are stable when stored at -40° C to -80° C.
We carefully pack with dry ice during shipment. No additive or preservative.
Expiry date > 1 year.
Plastic vials.
