

HUMAN PLASMAS

Fibrinogen plasmas

Plasma with high level of fibrinogen: 4.5 - 10 g/L

Associated products

Afibrinogenemia plasma

Human dysfibrinogenemia plasma

Plasma set with different fibrinogen concentrations

Informations

Fibrinogen is a soluble protein made by the liver. Under the action of thrombin, fibrinogen is converted into fibrin. In association with FXIII, calcium ions, fibrin forms a stable network which ensures coagulation.

Advantages

Minimize test time. Ready to use.

Characteristics

Special plasmas are derived from patients with a congenital deficiency, severe or moderate, or presenting a particular profile. No buffer or preservatives are added. Quickly frozen at -80° C, the plasma maintains perfectly intact the matrix. All plasmas are stable when stored at -40° C to -80° C. We carefully pack with dry ice during shipment. No additive or preservative. Expiry date > 1 year. Plastic vials.
