

## DEFICIENT PLASMAS

### Immunodepleted deficient plasmas

## Plasma Factor X deficient immuno depleted

### Associated products

Human Factor X congenital deficient plasma  
(severe <1%)

Human Factor X congenital deficient plasma >5%

### Informations

Factor X (FX) is a glycoprotein synthesized by the liver, dependent on vitamin K. FX is involved in the common pathway of coagulation.

It is activated in FXa by the FT-FVIIa complex or by the FVIIIa-FIXa complex in the presence of phospholipids.

FXa is neutralized by TFPI and antithrombin.

**Plasma deficient for Factor X assay.**

### Advantages

Reduces the time needed to set up your test protocols.  
Ready to use after thawing.

### Characteristics

This plasma is immunodepleted and assayed at less than 1% for the specific factor.  
Freezing the plasmas at -80 °C makes it possible to keep the matrix perfectly intact and to avoid reconstitution.  
Our packages contain dry ice for transport.  
No additives or preservatives.  
Expiration date > 1 year.  
Plastic bottles.
