

DEFICIENT PLASMAS

Immunodepleted deficient plasmas

Plasma Factor XI deficient immuno depleted

Associated products

Human Factor XI congenital deficient plasma
(severe <1%)

Human Factor XI congenital deficient plasma >5%

Informations

Factor XI (FXI) is a protein synthesized by the liver. It participates in the contact phase which initiates the intrinsic pathway of coagulation.

It is activated by FXIIa to factor FXIa which will itself activate FIX in the presence of calcium ions.

Reference	Presentation	Format
9-FXI-ID	Vial	from 50 mL

Plasma deficient for the determination of Factor XI.

Advantages

Reduces the time needed to set up your test protocols.
Ready to use after thawing.

Characteristics

This plasma is immunodepleted and assayed at less than 1% for the specific factor.
Freezing the plasmas at -80 °C makes it possible to keep the matrix perfectly intact and to avoid reconstitution.
Our packages contain dry ice for transport.
No additives or preservatives.
Expiration date > 1 year.
Plastic bottles.
